COMICCRAFT – AI COMIC STORY CREATOR USING GEMINI MODELS

8. Project Demonstration Phase

8.1 Introduction

The Project Demonstration Phase presents the completed ComicCraft application.

The purpose of the demonstration is to explain the project idea, show the working application, demonstrate the main features, and present the final generated comic.

8.2 Project Introduction

The project is titled:

ComicCraft – AI Comic Story Creator using Gemini Models

ComicCraft is a Generative AI-based web application that uses Google Gemini models to create comic stories from simple user inputs.

8.3 Problem Statement

Creating comics manually requires several steps such as developing a story, creating characters, writing dialogues, generating images, arranging panels, and preparing the final output.

ComicCraft simplifies this process by using Generative AI.

8.4 Demonstration Steps

The project can be demonstrated using the following steps:

Step 1: Start the FastAPI application.

Step 2: Open the ComicCraft application in a web browser.

Step 3: Enter a sample story prompt.

Step 4: Enter the character name.

Step 5: Enter the story setting.

Step 6: Select the story tone.

Step 7: Select the art style.

Step 8: Click the Generate button.

Step 9: Show the generated story and comic panels.

Step 10: Show the generated images and dialogues.

Step 11: Display the completed comic preview.

Step 12: Export the comic as a PDF.

8.5 Main Features Demonstrated

The following features can be explained during the demonstration:

- User-friendly web interface
- Generative AI story creation
- Google Gemini integration
- Character-based storytelling
- Narration generation
- Dialogue generation
- Image prompt generation
- Comic panel creation
- Comic preview
- PDF export

8.6 Expected Output

The final output should contain multiple comic panels with characters, scenes, narration, dialogues, and generated images.

The completed comic can be previewed through the application and exported as a PDF.

8.7 Conclusion

The Project Demonstration Phase shows the complete working process of ComicCraft, from entering a simple story idea to generating a complete AI-based comic.

The project demonstrates how Generative AI can be combined with web technologies and image generation to create an automated comic creation application.
